

Cut, Clean, Pack and Pallet

From Field to Freeway... In One Day

The new **EcoAgHarvester** is a diesel powered, self-contained track hydrostatic harvesting machine, incorporating hydraulic technology to perform multiple operations in *all* weather and in *all* field conditions – ensuring a seasonal advantage for multi-season growers.

The Harvester and crew can clean and pack three to four thousand cartons of celery a day.

The EcoAgHarvester Story

When off-loaded to the field from a lowboy flatbed, the **EcoAgHarvester's** staging area decks are lowered into place. The packing begins and ends here, where flat boxes are assembled and marked and where empty pallets await final product.

Next, the two washing and packing station extensions – with their integrated conveyor belts – fold out

to an impressive 50-foot wide expanse, ready to process 14 beds at a time.

The food quality stainless steel surfaces allow the **EcoAgHarvester** to deliver cleaner celery with improved food safety, less waste, and improved packing efficiency. This versatility allows harvesting and packaging of various product sizes, from hearts to bins, all without the produce ever touching the ground.

The boxes of celery move on conveyor belts just behind the washing and packing tables to the middle of the staging area, where they are stacked on the

waiting pallets. Once the boxes are filled with clean, bagged produce, the pallets are pushed to the back of the staging area on special chain roller guides.

From here they are transported with an **EcoAgLoader** to your trailers.

Produce travels from field to distribution center or store without leaving the pallet, saving time and labor costs and resulting in fresher produce.

Faster. Safer. More Profitable.

Fewer workers will suffer injuries because this revolutionary harvester automates much of the lifting required in competing systems, which translates to lower medical insurance claims and associated costs.

And because of the reduced lifting normally associated with harvesting methods such as “humps,” an expanded labor role can be extended to women in the work force.

Built with unsurpassed quality and designed for pure efficiency, the **EcoAgHarvester** is destined to become the standard in celery harvesting.

Features & Benefits

- Works in all weather, in fields wet or dry
- Harvester front is all stainless steel for food safety
- Can pack all sizes of products
- Cleaner: reduces risk of E Coli
- Safer: Reduces worker injuries, and once this is demonstrated, the cost of insurance
- End of day clean up is one hour, compared to three hours for field-workers using the old “Hump” method
- No humps to push – can reduce Workers Compensation and allow women to do the packing
- Reduces the number of people working: 14 cutters, 14 packers, 2 box makers, 2 loaders, 1 driver
- Lease/purchase option available
