

EcoAgLoader

Designed by: John Berry

Modified from a Caterpillar 939C, the powerful **EcoAgLoader** takes advantage of both ends to make quick work of pallets built right in the field. Each of our 75 units sold carries up to six tons or four pallets from field to truck in all weather and ground conditions, saving significant time and labor while leaving the field in good shape for next year's crop. The **EcoAgLoader's** extended reach can load an entire trailer or truck from the same side and – as the ideal **EcoAgHarvester** companion – it helps ensure clean pallets that meet the highest food safety standards.

Key Features

- Caterpillar low hour 939C
- High rise modifications
- 80" track centers
- Front and rear carriage with dual side shifters
- Set up for 40" pallets
- 30" track APEX mud shoes
- 4 lights forward, 4 lights rear
- Steps on one side
- No transmission, steering clutches, or brakes
- Hydrostat drive with 6 cylinder 100 HP
